

## A PRACTICAL GUIDE TO RESIDENTIAL WATER TREATMENT AND CONDITIONING SYSTEMS IN BAJA CALIFORNIA SUR

The vast majority of [new and emerging technologies](#) in the [Water Treatment and Conditioning Industry](#) usually take between 3 to 10 years to percolate into Mexico. We, at [H2O Profesionales Internacionales, S.A. de C.V.](#) invariably have these [new technology products](#) configured into our [Water Treatment and Conditioning Systems](#) within days of these products coming out of the respective manufacturers production plants.

The exception to this rule are [apparent breakthrough un-certified products](#) such as magnetic water softeners, designed and marketed by Alchemists and Charlatans which are soon pounced-on by purveyors and multi-level marketing chains and sold to the unsuspecting and unknowing members of the General Public, often at exorbitant prices. **Rest assured, we do not sell, market or recommend these type of products unless they are endorsed by the [Water Quality Association or NSF etc.](#)**
